

# How To Use A Box Bag With A Loose Base

## Step 1:

The base sheet is laid on the case base. Desiccant is added & the bag is placed over the machine.

## Step 2:

The 3D barrier bag is sealed to the base sheet with a hand held heat sealer.

## Step 3:

A small gap is left at the end of the seal, and the air is evacuated from the bag with a shop vac.

## Step 4:

The wooden case is now completed and the packed product is now ready for transit & storage.
